

India Basin Waterfront Park Design

Course: LAN 679- Advanced Digital Graphics for Landscape Architecture

Semester: Spring 2016

Instructor: Nick Gotthardt

Project Narrative

This Project focus on the development of conceptual design for a new Bike Trail and Boat House for the India Basin Park in San Francisco's central Bay waterfront.

Through an Iterative design drawing process, I have developed design proposals which extend the existing Bay Trail network through India Basin Park, providing spaces for various outdoor community programming and promoting Bay health through a series of landscape interventions. Work began with a set of site analysis drawings, followed by three conceptual vignettes that illustrate the initial vision of the new India Basin Bay Trail.
